

SPECTRUM HOSE LTD

Handling the Pressure.....

MIKALOR CLAMPS

A robust and reusable hose clamp. For use in applications where a heavier degree of clamping than is offered by a wormdrive hose clip, is needed. Fittings can be securely attached to pressure and suction hoses including PVC, Polypropylene, Rubber, Canvas and all types of flexible ducting.

Construction: A low carbon steel CK15 (Din 1.1141) band. Nut and bolt to ISO strength grades 8 (nut) and 8.8 (bolt). Finished in zinc plate - gold passivate. Bevelled edges of the band reduce wear and tear to the hose. A longer nut also makes assembly much easier.

Identification: Every Mikalor clamp has its size range (mm) stamped on the band and the new 'Super' trade mark.

Part Number	Range of Adjustment	Width (mm)	Maximum Height of Clamp
